Site Reliability Engineering Incident Response SOP

Document Version 2.4 | Classification: Enterprise Confidential

1. Incident Severity Definitions

Severity-1 (Critical Outage): Core user-facing functionality is fully unavailable.
The escalation bridge must be convened within 5 minutes.
Executive leadership notification is required within 15 minutes.
Status page public updates must occur every 20 minutes until resolved.

Severity-2 (Major Impairment): Critical feature degraded with significant impact.
The escalation bridge must be convened within 15 minutes.
Status updates are provided every 45 minutes.

2. Command Authority and Roles

The Incident Commander (IC) or Lead SRE has single-point operational authority to declare a Severity-1 incident, order service rollbacks, and direct response teams.

A blameless root-cause analysis (RCA) must be published within 72 hours of closure, including a chronological timeline, contributing causes, and preventive action items.
